

Wyoming Law Enforcement Retirement Fund

Actuarial Valuation Report
for the Year Beginning January 1, 2020

May 29, 2020

Board of Trustees
Wyoming Law Enforcement Retirement Fund
6101 Yellowstone Road
Suite 500
Cheyenne, WY 82002

Dear Board of Trustees:

Subject: Actuarial Valuation as of January 1, 2020

We are pleased to present the report of the actuarial valuation of the Wyoming Law Enforcement Retirement Fund ("the Fund") for the plan year commencing January 1, 2020. This report describes the current actuarial condition of the Fund, determines the calculated employer contribution rate (the actuarially determined contribution rate), and analyzes changes in this contribution rate from the prior year. Valuations are prepared annually, as of January 1, the first day of the Fund's plan year.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

Financing objectives and funding policy

The employer and employee contribution rates are specified in the statute. The purposes of the valuation are to measure the System's funding progress and to determine whether or not the statutory contribution is sufficient to meet the obligations of the Fund. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

Progress toward realization of financing objectives

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan's funded status. The funded ratio, based upon the assumption of no further cost-of-living adjustment increases, as of January 1, 2020 is 84.5%. As of January 1, 2019, this funded ratio, based on the assumption of no future COLAs and the actuarial value of assets, was 85.57%. On a market value of assets basis, the funded ratio increased from 79.92% as of January 1, 2019 to 88.17% as of January 1, 2020. The funded status alone is not appropriate for assessing the need for future contributions. The funded status is also not appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.

Benefit provisions

The benefit provisions reflected in this valuation are those, which were in effect on January 1, 2020. W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. Therefore, this valuation does not include any liability for future cost-of-living increases.

Effective July 1, 2019, the interest on contributions for non-vested inactive Employees was 0%.

The benefit provisions are summarized in Appendix B of the report.

Assumptions and methods

Actuarial assumptions and methods are set by the Board, based upon recommendations made by the plan's actuary. The current assumptions used in the actuarial valuation were adopted by the Board effective August 23, 2017 and were first utilized with the January 1, 2018 valuation report. For a detailed description of the experience related to these assumptions, as well as the rationale for any changes, please see our latest Wyoming Retirement System Actuarial Experience Study Report. Our experience study report was dated January 10, 2018 and it covered the five-year investigation period ending December 31, 2016. All actuarial assumptions used in this report are reasonable for the purposes of this valuation.

The results of the actuarial valuation are dependent upon the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution amounts and funding periods. The actuarial calculations presented in the report are intended to provide information for rational decision making.

The 8.60% employer contribution and the 8.60% employee contribution are the rates that comply with State law. Due to the many factors affecting a retirement system, users of this report should be aware that contributions made at that rate do not necessarily guarantee long-term benefit security.

Assumptions and Methods (continued)

The employer contribution requirement in Table 1 of this report is determined using the actuarial assumptions and methods disclosed in Appendix A of this report. This report includes risk metrics in Appendix C but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

All assumptions and methods are described in Appendix A of our report.

Data

Member data for retired, active and inactive members was supplied as of January 1, 2020 by the System's staff. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data.

Asset and financial information as of January 1, 2020 was prepared by the Wyoming Retirement System and is the responsibility of management. Eide Bailly, LLP provided us the asset and financial information and will opine on Wyoming Retirement System's statements.

We relied on the System's staff for the accuracy and completeness of the information.

Plan experience

As part of each valuation, we examine the Fund's experience relative to the assumptions. Experience in a given year will deviate from the assumptions and a gain occurs if the liabilities grow slower than the assumption set anticipates, and a loss occurs if the liabilities grow faster. This past fiscal year the Fund had a total experience loss of approximately \$14.7 million due to an investment loss of \$5.2 million, a contribution loss of \$1.6 million and a liability loss of \$7.9 million. The aggregate results of these analyses are disclosed in Tables 4 and 5 under Section III of the report.

Actuarial certification

All of the tables contained in this actuarial valuation report were prepared by Gabriel, Roeder, Smith & Company. Historical information for years prior to 2010 was prepared by the prior actuarial firm and was not subjected to our actuarial review.

We certify that the information presented herein is accurate and fairly portrays the actuarial position of the System as of January 1, 2020.

All of our work conforms with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of state law and, where applicable, the Internal Revenue Code and ERISA.

The undersigned are independent actuaries and consultants.

Mark Randall and Thomas Lyle are Enrolled Actuaries and Mark Randall, Paul Wood, and Thomas Lyle are Members of the American Academy of Actuaries, and all three meet all the Qualification Standards of the American Academy of Actuaries.

Finally, all of the undersigned are experienced in performing valuations for large public retirement systems.

Respectfully submitted,

Gabriel, Roeder, Smith & Company

Mark Randall, FCA, EA, MAAA
Chief Executive Officer

Paul Wood, ASA, FCA, MAAA
Consultant

Thomas Lyle, ASA, FCA, EA, MAAA
Senior Analyst

SECTION I

EXECUTIVE SUMMARY

Executive Summary

Item	January 1, 2020	January 1, 2019
	No COLA	No COLA
1. Contributions:		
a. Total normal cost	14.26%	14.31%
b. Employee contributions	(8.60%)	(8.60%)
c. Other expected contributions	0.00%	0.00%
d. Net employer normal cost	5.66%	5.71%
e. Amortization payment	5.00%	4.35%
f. Administrative expenses	0.41%	0.42%
g. Required contribution	11.07%	10.48%
h. Statutory	(8.60%)	(8.60%)
i. Shortfall/(surplus)	2.47%	1.88%
2. Funding Elements:		
a. Market value of assets (MVA)	\$700,886,675	\$599,051,838
b. Actuarial value of assets (AVA)	\$671,746,944	\$641,342,345
c. Actuarial accrued liability (AAL)	\$794,954,725	\$749,524,885
d. Unfunded/(overfunded) actuarial accrued liability	\$123,207,781	\$108,182,540
3. Contributions and Ratios:		
a. Annual required contribution	\$18,231,644	\$16,754,321
b. Actual contributions	N/A	14,270,844
i. Employer	N/A	13,856,199
ii. Other	N/A	414,645
c. Percentage contributed	N/A	85.18%
d. Funded ratio on an actuarial basis (AVA/AAL)	84.50%	85.57%
e. Funded ratio on a market basis (MVA/AAL)	88.17%	79.92%
f. Projected payroll	\$164,757,930	\$159,747,760

SECTION II

DISCUSSION

Contribution Requirements

- Exhibits throughout this report are based primarily, unless stated otherwise, on the assumption of no future cost-of-living adjustments (COLAs).
- W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. The actuarial value funded ratio is 84.5% and the market value funded ratio is 88.17%.
- There were no changes to the benefit provisions reflected in this actuarial valuation.
- The actuarial assumptions have not been updated since the prior valuation. For a detailed description of the experience related to these assumptions, as well as the rationale for any changes, please see our latest Wyoming Retirement System Actuarial Experience Study Report.
- The amortization payment is based upon the following assumptions:
 - The funding period is based on a 30-year closed period for the initial base as of January 1, 2018 and 20-year closed period layers for future gains and losses
 - Amortization payment amounts are calculated in such a way that they will increase as a level percentage of payroll
 - Total payroll increases are assumed at 2.50% per year
 - Future growth in the number of active members is not reflected in the annual valuation
- The analysis of the changes in the contribution rates is shown in Table 5 under Section III of the report
- Using the current statutory contribution of 8.60% of pay, the current unfunded liability is not expected to be paid off in the next 40 years.
- As of the prior valuation, a rate increase was recommended. Even though the results improved over last year, a rate increase could still be considered in order to mitigate future downside funded ratio risk.
- At the time this report is being issued, we are living through the global COVID-19 pandemic. As a result, the financial markets are significantly down and experiencing extreme volatility. A discussion of possible impacts of the pandemic will be provided outside of this report.

Calculation of Contribution Rates

The funds available to pay benefits come from two sources, contributions as specified in the statute and investment income on those contributions (the majority of the funds available to pay benefits typically come from investment income). The Fund receives contributions from two sources, employer contributions and member contributions which are both determined as a percentage of pay. As shown in Table 1 under Section III of the report, the employer contribution rate has three components:

- The normal cost percentage (NC%)
- The amortization percentage (UAAL%)
- The administrative expenses

The NC% is the theoretical amount which would be required to pay the members' benefits if this amount had been contributed from each member's entry date and if the fund's experience exactly followed the actuarial assumptions. The NC% is shown in Table 3 under Section III of the report.

Members are required to make employee contributions and only the excess of the NC% over the member contribution rate is included in the employer contribution rate.

The actuarial accrued liability (AAL) is the difference between (i) the actuarial present value of all future benefits for all current participants of the fund, including active, inactive and retired members, and (ii) the actuarial present value of future normal costs. Thus the AAL represents the liability associated with past years. The unfunded actuarial accrued liability (UAAL) is the difference between the AAL and the actuarial value of assets (AVA). It is the shortfall/excess between the liability associated with prior years (the AAL) and the assets actually accumulated (the AVA). This shortfall/excess can arise from several sources, including actuarial gains and losses, which are caused by differences between actual experience and the plan's assumptions, changes to the plan's actuarial assumptions, and amendments to the benefit provisions.

The UAAL% is the amount required to fund this difference. It is the amount, expressed as a level percentage of payroll, necessary to amortize the UAAL. Amortization bases are established each year and amortized based on the Board's policy. The Board's policy consists of amortizing the unfunded liability as of January 1, 2018, over a closed 30 year period with each subsequent amortization base created as a result of year to year experience changes over individual 20 year closed periods. The Executive Summary shows the UAAL%, called Amortization Payment, compared to that of last year. Administrative expenses are the average of the actual expenses for the prior two years, with each year projected at 2.50% to the valuation date.

The calculated rate is used in determining the contributions necessary to meet the Actuarially Determined Contribution for the twelve-month period beginning January 1, 2020. Note that the employer contribution is set at 8.60% of payroll. Therefore, the Actuarially Determined Contribution will not be fully contributed. This is detailed in the Executive Summary.

Financial Data and Experience

As of January 1, 2020, the Fund has a total market value of about \$701 million. Financial information was received from Eide Bailly, LLP.

Table 7 under Section III of the report shows a reconciliation of the market values between the beginning and end of 2019.

During 2019, the total investment return on the market value of assets (MVA), as reported by Meketa Investment Group, Inc., was 18.72%, as shown in Table 10 under Section III of the report.

In determining the contribution rates and funded status of the Fund, an actuarial value of assets (AVA) is used rather than the market value of assets. The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (or less than) expected investment income. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

The development of the AVA is shown in Table 9 under Section III of the report. The AVA is \$672 million. The AVA is 95.84% of the MVA as of December 31, 2019, compared to 107.06% last year. The difference between the AVA and the MVA is the deferred gains and losses. As of January 1, 2019, the total deferred loss was \$42.3 million. As of January 1, 2020, the total deferred gain was \$29.1 million.

In addition to the market return, Table 10 also shows the return on the actuarial value of assets for the Fund. For 2019, this return was 6.18%. Because this is less than the assumed 7.00% investment return for the prior year, an actuarial loss occurred, increasing the unfunded actuarial accrued liabilities of the Fund by \$5.2 million.

Member Data

Member data as of January 1, 2020 was supplied electronically by the Fund's staff. While we did not audit this data, we did perform various tests to ensure that it was internally consistent, consistent with the prior year's data, and was reasonable overall.

Table 15 under Section III of the report shows the number of members by category (active, inactive, retired, etc.) along with member statistics. Tables 16 through 28 show summaries of certain historical data and include membership statistics.

The total payroll shown on the statistical tables is the amount that was supplied by the Fund, annualized, if necessary. For the cost calculations, the pay amounts were adjusted in accordance with the actuarial assumptions to reflect one year's salary increase.

Total active member payroll increased 3.14%, compared with a 2.60% increase the prior year.

The average of the final average salaries for participants who retired or became disabled this year is \$64,946.

Of the 2,660 active participants, 363 are eligible or will become eligible for normal retirement in 2020, and 423 are eligible or will become eligible for early retirement in 2020.

If the payroll does not grow at the assumed 2.50% per year average, then the current amortization payments may be understated and the funding position of the Fund will not strengthen as assumed over time. Table 5 under Section III of the report shows, for the past year, payroll for the plan increased more than expected, so the effect is a decrease in the calculated contribution rate of 0.03% of payroll.

Benefit Provisions

Appendix B of the report includes a more detailed summary of the benefit provisions for the Fund. A brief summary from W.S. 9-3-432 is as follows:

- *Normal Retirement Eligibility*
 - Age 60 with at least four years of service as a law enforcement officer or any age with at least twenty years of service as a law enforcement officer.
- *Normal Retirement Benefit*
 - 2.50% of highest average five-year salary not to exceed 75.0% of highest average five-year salary.
- *Normal Form of Payment*
 - Monthly benefit for life with a lump-sum death benefit equal to the excess (if any) of the employee contributions with interest over the total benefits received.
- *Employee Contributions* are required
 - 8.60% of pay.
- *Post-retirement Cost-of-Living Adjustments (COLAs)*
 - W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.

Pursuant to Enrolled Act No. 25, interest crediting for non-vested inactive members on a prospective basis is eliminated beginning July 1, 2019.

Actuarial Methods and Assumptions

Appendix A of the report includes a summary of the actuarial assumptions and methods used in this valuation. A few highlights are listed as follows:

- Costs are determined using the Entry Age Normal actuarial cost method, calculated as a level percentage of payroll.
- The unfunded actuarial accrued liability is amortized over an effective 25 year closed period as a level percent of payroll. Future valuations will include additional amortization layers on a closed 20 year basis.
- The assumed annual investment return rate is 7.00%, with assumed inflation of 2.25%.
- Payroll is assumed to increase at 2.50% per year.
- Inactive vested participants are assumed to retire at age 60 or the valuation date if over age 60. Those with over 20 years of service are assumed to retire immediately.
- No benefit data is available for all members entitled to deferred benefits. The present value of benefits expected to be paid to vested inactive non-retired members is approximated using the data provided.

The average future lifetime for current pensioners is 22.0 years.

The actuarial assumptions and methods were reviewed in detail as part of the 2017 Experience Study covering the five year period ending December 31, 2016. Please see Appendix A for a summary of the new assumptions.

GASB and Funding Progress

Governmental Accounting Standards Board Statement Number 67 (GASB 67) contains certain accounting requirements for the Fund. Schedules, notes and required supplementary information are provided under separate cover.

SECTION III

SUPPORTING EXHIBITS

Table 1A
Calculation of Annual Required Contribution Rate
(Assumes No Future Cost-Of-Living Increases)

Item	January 1, 2020	January 1, 2019
1. Projected valuation payroll	\$164,757,930	\$159,747,760
2. Present value of future pay	\$1,189,757,833	\$1,152,949,650
3. Employer normal cost rate	5.66%	5.71%
4. Actuarial accrued liability for active members		
a. Present value of future benefits for active members	\$507,518,273	\$489,421,727
b. Less: present value of future employer normal costs	(63,770,755)	(62,281,903)
c. Less: present value of future employee contributions	(102,319,174)	(99,153,669)
d. Actuarial accrued liability	\$341,428,344	\$327,986,155
5. Total actuarial accrued liability for:		
a. Retirees and beneficiaries	\$373,440,208	\$346,024,280
b. Disabled members	51,168,321	48,651,340
<i>Duty</i>	33,922,976	33,922,976
<i>Non-duty</i>	17,245,345	14,728,364
c. Inactive members	28,917,852	26,863,110
d. Active members (Item 4d)	341,428,344	327,986,155
e. Total	\$794,954,725	\$749,524,885
6. Actuarial value of assets (Table 9)	\$671,746,944	\$641,342,345
7. Unfunded actuarial accrued liability (UAAL) (Item 5e - Item 6)	\$123,207,781	\$108,182,540
8. Effective UAAL amortization period	25 years	26 years
9. Assumed payroll growth rate	2.50%	2.50%
10. Employer Contribution requirement		
a. UAAL amortization payment as % of pay	5.00%	4.35%
b. Employer normal cost	5.66%	5.71%
c. Administrative expense	0.41%	0.42%
d. Contribution requirement (a + b + c)	11.07%	10.48%

Table 1B

Calculation of UAAL Amortization Payment (Assumes No Future Cost-Of-Living Increases)

UAAL as of January 1, 2020				\$123,207,781
Total Prior Remaining Amortization Bases as of January 1, 2020				108,562,282
2020 Amortization Base as of January 1, 2020				\$14,645,499
2020 Payment (20 years, level percent of pay amortization)				\$1,105,064
As of January 1, 2020				
Base Year	Initial Base	Remaining Base	Years Remaining	Amortization Payment
2020	\$ 14,645,499	\$ 14,645,499	20	\$ 1,105,064
2019	24,129,271	23,935,020	19	1,866,171
2018	83,395,794	84,627,262	28	5,261,444
Total		\$ 123,207,781		\$ 8,232,679

Table 2
Cost Breakdown
(Assumes No Future Cost-Of-Living Increases)

Item	Present Value of Future Normal Costs (1)	Actuarial Accrued Liabilities (2)	Total Present Value of Benefits (3) = (1) + (2)
Age and service allowances based on total service and disability benefits likely to be rendered by present active members	\$123,054,096	\$337,179,673	\$460,233,769
Death-in-service benefits likely to be paid on behalf of present active members (employer financed portion)	6,002,332	4,312,437	10,314,769
Separation benefits (refunds of contributions and deferred allowances) likely to be paid to present active members	37,033,501	(63,766)	36,969,735
Benefits likely to be paid to vested inactive members	0	24,249,466	24,249,466
Benefits to be paid to members due refunds	0	4,668,386	4,668,386
Benefits to be paid to current retirees, disabled members, beneficiaries, and future beneficiaries of current retirees	0	424,608,529	424,608,529
Total	\$166,089,929	\$794,954,725	\$961,044,654
Actuarial Value of Assets	0	671,746,944	671,746,944
Liabilities to be covered by future contributions	\$166,089,929	\$123,207,781	\$289,297,710

Table 3
History of Total Normal Cost
(Assumes No Future Cost-Of-Living Increases)

Fiscal Year Ending December 31	Normal Cost as Percent of Payroll
2007	13.56%
2008	13.42%
2009	13.46%
2010	14.14%
2011	14.13%
2012	14.14%
2013	14.12%
2014	14.56%
2015	14.54%
2016	14.46%
2017	14.26%

2019	14.31%
2020	14.26%

Table 4
Calculation of Total Actuarial Gain/(Loss)
Assumes No Future Cost-Of-Living Increases

Item	January 1, 2020
1. Derivation of Experience Gain/(Loss)	
a. Unfunded actuarial accrued liability (UAAL) - previous valuation	\$108,182,540
b. Normal cost (NC) for fiscal year ending December 31, 2019	22,866,557
c. Expected administrative expenses for fiscal year ending December 31, 2019	672,300
d. Actuarially determined contribution for fiscal year ending December 31, 2019	30,492,627
e. Interest accrual:	
(i) For whole year on (a)	7,572,778
(ii) For half year on (b) + (c) - (d)	(239,266)
(iii) Total interest: (e)(i) + (e)(ii)	7,333,512
f. Change in UAAL due to plan changes	-
g. Change in UAAL due to assumption change	-
h. Expected UAAL current year: (a) + (b) + (c) - (d) + (e)(iii) + (f) + (g)	108,562,282
i. Actual UAAL current year	123,207,781
j. Experience gain/(loss): (h) - (i)	(14,645,499)
k. Experience gain/(loss) as a % of actuarial accrued liability	-1.84%
2. Approximate Portion of Gain/(Loss) Due to Investments (at Actuarial Value)	(\$5,222,790)
3. Approximate Portion of Gain/(Loss) Due to Contributions and Administrative Expenses higher or lower than expected*	(\$1,553,380)
4. Approximate Portion of Gain/(Loss) Due to Liabilities: (1)(j) - (2) - (3)	<u>(\$7,869,329)</u>
a. Age & service retirements	(817,391)
b. Non-duty disability retirements	(182,580)
c. Duty disability retirements	(386,801)
d. Death-in-service	537,786
e. Withdrawal from employment	(3,872,154)
f. Rehires	(389,117)
g. Pay increases	(666,491)
h. Death after Retirement	(637,981)
i. Service Purchases	(767,393)
j. Other	(687,207)
k. Other as a % of actuarial accrued liability	-0.09%

*Includes \$0.77 million in additional employee contributions for service purchases. These additional

contributions offset the liability loss due to service purchases.

Table 5
Change in Calculated Contribution Rate Since the Prior Valuation
Assumes No Future Cost-Of-Living Increases

Item	January 1, 2020
1. Calculated contribution rate as of January 1, 2019	10.48%
2. Change in contribution rate during year	
a. Change in employer normal cost	-0.05%
b. Actuarial (gain) loss from investments on actuarial value of assets	0.24%
c. Actuarial (gain) loss from liability sources and administrative expenses	0.35%
d. Difference between contributions made and required contributions	0.07%
e. Effect of payroll growing (faster)/slower than assumption	-0.03%
f. Other changes	0.01%
g. Total change	0.59%
3. Calculated contribution rate as of January 1, 2020	11.07%

Table 6
Statement of Plan Net Assets

Assets at Market Value		
Item	FYE 2019	FYE 2018
1. Cash and Cash Equivalents (Operating Cash)	\$23,970,725	\$45,945,614

* Employer contributions include other funding sources and employee contributions may include member redeposits and member service purchase contributions

** Net of investment expenses

Table 9
Development of Actuarial Value of Assets

Item	FYE 2019	FYE 2018
1. Actuarial value of assets, beginning of year (before corridor)	\$641,342,345	\$625,562,038
2. Market value, end of year	\$700,886,675	\$599,051,838
3. Market value, beginning of year	\$599,051,838	\$630,242,119
4. Non-investment/administrative net cash flow:		
a. Employee contributions	\$13,880,776	\$13,482,246
b. Employer contributions	13,856,199	13,471,498
c. Other contributions	1,205,555	673,644
d. Refund of employee accounts	(2,425,983)	(3,970,912)
e. Retirement benefits	(34,850,971)	(32,013,552)
f. Administrative expenses	(623,912)	(664,066)
g. Total net cash flow: [sum of (4a) through (4f)]	(\$8,958,336)	(\$9,021,142)
5. Investments and securities lending:		
a. Interest and dividends on investments	\$10,766,989	\$10,850,973
b. Gross income from securities lending	1,060,501	975,475
c. Fees and expenses	(5,284,202)	(5,374,053)
d. Total net income: [sum of (5a) through (5c)]	\$6,543,288	\$6,452,395
6. Investment income:		
a. Actual market return: (2) - (3) - (4g) - (5d)	\$104,249,885	(\$28,621,534)
b. Assumed rate of return	7.00%	7.00%
c. Assumed amount of return	35,082,102	37,354,153
d. Amount subject to phase-in: (6a) - (6c)	\$69,167,783	(\$65,975,687)
7. Phase-in recognition of investment income:		
a. Current year: 0.20 * (6d)	\$13,833,557	(\$13,195,137)
b. First prior year	(13,195,137)	6,973,578
c. Second prior year	6,973,578	(556,237)
d. Third prior year	(556,237)	(9,318,216)
e. Fourth prior year	(9,318,216)	(2,909,087)
f. Total recognition	(\$2,262,455)	(\$19,005,099)
8. Actuarial value of assets, end of year		
a. Preliminary actuarial value of assets, end of year: (1) + (4g) + (5d) + (6c) + (7f)	\$671,746,944	\$641,342,345
b. Upper corridor limit: 120% * (2)	841,064,010	718,862,206
c. Lower corridor limit: 80% * (2)	560,709,340	479,241,470
d. Actuarial value of assets, end of year	\$671,746,944	\$641,342,345
9. Difference between market and actuarial value of assets	\$29,139,731	(\$42,290,507)
10. Actuarial rate of return	6.18%	3.99%
11. Market rate of return*	18.72%	-3.52%
12. Ratio of actuarial value to market value of assets	95.84%	107.06%

* Current year market rate of return is based on unaudited data and is supplied by the plan's investment consultant.

Table 10

History of Investment Returns

Plan Year (1)	Market Value (2)	Actuarial Value (3)
2004	11.54%	5.82%
2005	8.22%	7.08%
2006	12.63%	9.23%
2007	7.44%	10.54%
2008	-29.63%	-12.67%
2009	23.72%	17.23%
2010	13.80%	3.34%
2011	-0.90%	1.77%
2012	14.05%	2.91%
2013	13.53%	11.24%
2014	4.70%	8.64%
2015	-0.26%	5.89%
2016	7.60%	6.68%
2017	14.20%	7.17%
2018	-3.52%	3.99%
2019	18.72%	6.18%

Average returns:

Last five years:	7.04%	5.98%
Last ten years:	7.95%	5.75%

The market returns above are gross of investment expenses and were provided by the plan's investment consultant. The actuarial returns above are based on the financial information provided by the plan's auditors.

* Includes Disabled Members, Beneficiaries, and Deferred Vested Members. Retirement benefit payments for deferred vested members are assumed to commence at age 60.

APPENDIX A

SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Actuarial Assumptions and Methods

The following methods and assumptions were used in preparing the January 1, 2020 actuarial valuation report.

1. Valuation Date

The valuation date for any given year is January 1st, the first day of each plan year. This is the date as of which the actuarial present value of future benefits and the actuarial value of assets are determined.

2. Actuarial Cost Method

The actuarial valuation uses the Entry Age Normal (EAN) actuarial cost method, amortized as a level percentage of payroll. Under this method, the employer contribution rate is the sum of (i) the employer normal cost rate, and (ii) the rate that will amortize the unfunded actuarial accrued liability (UAAL).

- a. The valuation is prepared on the projected benefit basis, under which the present value, at the investment return rate assumed to be earned in the future (current 7.00%), of each participant's expected benefit payable at retirement or death is determined, based on his/her age, service, sex and compensation. The calculations take into account the probability of a participant's death or termination of employment prior to becoming eligible for a benefit, as well as the possibility of his/her terminating with a service, disability, or survivor's benefit. Future salary increases are also anticipated. The present value of the expected benefits payable for the active participants is added to the present value of the expected future payments to retired participants and beneficiaries to obtain the present value of all expected benefits payable from the Fund on account of the present group of participants and beneficiaries.
- b. The employer contributions required to support the benefits of the Fund are determined using a level funding approach, and consist of a normal cost contribution and a unfunded accrued liability contribution.
- c. The normal cost contribution is determined using the "entry age normal" actuarial cost method. Under this method, a calculation is made to determine the average uniform and constant percentage rate of employer contribution which, if applied to the compensation of each new participant during the entire period of his/her anticipated covered service, would be required to meet the cost of all benefits payable on his/her behalf based on the benefits provisions applicable for the individual member.

- d. The unfunded accrued liability contributions are determined by subtracting the actuarial value of assets from the actuarial accrued liability. Amortization bases are established each year and amortized based on the Board's policy. The Board's policy consists of amortizing the unfunded liability as of January 1, 2018, over a closed 30 year period with each subsequent amortization base created as a result of year to year experience changes over individual 20 year closed periods. The current year amortization base is determined by taking the current unfunded liability less the outstanding amounts of prior year bases.

3. Actuarial Value of Assets

The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (less than) expected investment income, with interest, dividends, and other income recognized immediately. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

4. Economic Assumptions

a. Investment return

7.00% per year, compounded annually, composed of an assumed 2.25% inflation rate and a 4.75% net real rate of return. This rate represents the assumed return, net of investment expenses.

b. Salary increase rate

Age	Rate
20	7.00%
25	6.50%
30	5.00%
35	4.25%
40	4.25%
45	4.00%
50	3.50%
55	3.25%
60	3.00%

c. Payroll growth rate

In the amortization of the unfunded actuarial accrued liability, payroll is assumed to increase 2.50% per year. This increase rate is solely due to the effect of inflation on salaries, with no allowance for future membership growth.

d. Cost-of-Living adjustment

No cost-of-living adjustment is assumed since the policy for providing the benefit requires Board approval to make the recommendation to the Joint Appropriations Committee and the funded level of the plan shows a cost-of-living requirement would not be permitted.

5. Demographic Assumptions

a. Rates Before Retirement

Healthy Pre-Retirement Mortality:

RP-2014 Mortality Table for Healthy Employees, fully generational, projected with Scale MP-2017

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 100%

Healthy Post-Retirement Mortality:

RP-2014 Mortality Table for Healthy Annuitants, fully generational, projected with Scale MP-2017

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 88%

Disabled Mortality:

RP-2014 Disabled Mortality Table, fully generational, projected with Scale MP-2017

Males: No set back with a multiplier of 100%

Females: No set back with a multiplier of 100%

Age	Pre-Retirement		Post-Retirement		Disabled	
	Projected to 2020 using Scale MP-2017

60	2.22%	2.22%	3.00%	3.00%			

30% of active disabilities are assumed to be duty-related

c. Retirement Rates

Age	Reduced Rate	Unreduced Rate	Age	Reduced Rate	Unreduced Rate
50	2.0%	20.0%	61	NA	17.0%
51	2.0%	13.0%	62	NA	17.0%
52	2.0%	13.0%	63	NA	20.0%
53	2.0%	13.0%	64	NA	20.0%
54	2.0%	13.0%	65	NA	50.0%
55	2.0%	15.0%	66	NA	50.0%
56	2.0%	15.0%	67	NA	50.0%
57	2.0%	15.0%	68	NA	50.0%
58	2.0%	20.0%	69	NA	50.0%
59	2.0%	20.0%	70	NA	100.0%
60	NA	20.0%			

10% is assumed for members with at least 20 years of service before age 50

6. Other Assumptions

- Percent married: 85% of employees are assumed to be married. (No beneficiaries other than the spouse assumed.)
- Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
- Percent electing annuity on death (when eligible): All of the spouses of vested, married participants are assumed to elect an annuity.
- Percent electing deferred termination benefit: It is assumed that 45% of active members who terminate with a vested deferred benefit will elect to have their contributions refunded.

- e. Assumed age for commencement of deferred benefits: Members electing to receive a deferred benefit are assumed to commence receipt at the first age at which unreduced benefits are available, which for this plan is age 60.
- f. No benefit data is available for members entitled to deferred benefits. The benefit is estimated using the final average compensation and service provided by WRS.
- g. There will be no recoveries once disabled.
- h. No children are assumed for purposes of valuing the ordinary death benefit.
- i. Administrative expenses: Assumed to be the average of the prior two years, with each year projected at 2.50% to the valuation date.
- j. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported pay represents amount paid to members during the year ended on the valuation date.
- k. Decrement timing: Decrements of all types are assumed to occur mid-year.
- l. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
- m. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in the report, and the actual payroll payable at the time contributions are made.
- n. Benefit Service: All members are assumed to accrue one year of service each year.

APPENDIX B

SUMMARY OF PLAN PROVISIONS

Summary of Plan Provisions

Covered Members	County sheriffs, deputy county sheriffs, municipal police officers; Investigator of the Wyoming Livestock Board; meeting the specifications of W.S.7-2-101(a)(iv)(E), investigators employed by the Wyoming State Board of Outfitters and professional guides meeting the specifications of W.S. 7-2-101(a)(iv)(J); Correctional officers, probation and parole agents employed by the Wyoming Department of Corrections, Wyoming Law Enforcement Academy instructors, University of Wyoming campus police officers; And full-time dispatchers or detention officers for law enforcement agencies.
Final Average Salary	Employee's average annual salary for the highest paid five continuous years of service.
Service Retirement	
Eligibility	Age 60 with four or more years of service as a law enforcement officer or any age with at least twenty years of service as a law enforcement officer. Early retirement benefits are payable to any law enforcement officer who has at least four but less than twenty years of service and are at least age 50. Early retirement benefits are actuarially reduced by 5% per year before age 60.
Monthly Benefit	2.50% of employee's highest five-year average salary for each year of credited service, not to exceed 75.0% of final average salary.
Vesting	Any employee who has left employment with four or more years of service, and who has not withdrawn accumulated contributions, is eligible to receive the above benefit or can elect to receive a lump-sum refund of contributions with interest. An employee who terminates with less than four years of service is only eligible for the lump-sum benefit.
Duty Disability Retirement	
Eligibility	No age or service eligibility requirements. Partial or total disability resulting from an individual and specific act, the type of which would normally occur only while employed as an employee, or as otherwise defined under W.S. 9-3-432(h).
Monthly Benefit	62.5% of Final Salary.
Non-duty Disability Retirement	
Eligibility	10 years of credited service. Partial or total disability, but not eligible for duty disability.
Monthly Benefit	50.0% of Final Salary.

Pre-retirement Duty Death Benefit

Eligibility	No age or service requirements.
Monthly Benefit	62.5% of member's final actual salary, payable to the surviving spouse plus 6% of the member's final actual salary for each unmarried child under 18. Payment shall not exceed the member's final actual salary.

Pre-retirement Non-duty Death Benefit

Eligibility	No age or service requirements.
Monthly Benefit	50% of the member's final actual salary payable to the surviving spouse plus 6% of the member's final actual salary for each unmarried child under 18. Payment shall not exceed 100% of the member's final actual salary.

Contributions

Employee	8.6% of salary. The employer may subsidize all or part of the employee contributions.
Employer	8.6% of salary.
Interest	3.0% annually. (0.0% for non-vested inactive members after July 1, 2019)

Cost-of-Living Improvements	W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.
------------------------------------	--

Optional Forms of Payment

Option 1	Monthly benefit for life with a lump-sum death benefit equal to the excess (if any) of the employee contributions with interest over the total benefits received.
Option 2	Monthly benefit for life. Upon death, 100% of the benefit continues to be paid to the beneficiary.
Option 2P	Monthly benefit for life. Upon death, 100% of the benefit continues to be paid to the beneficiary. Benefit reverts to Option 1 amount but without the cash refund feature upon beneficiary death.
Option 3	Monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary.
Option 3P	Monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary. Benefit reverts to Option 1 amount but without the cash refund feature upon beneficiary death.
Option 4	Monthly benefit for life with a guarantee of 120 monthly payments
Option 5	The largest possible monthly benefit payable for life with no lump-sum death benefit.
Other	Grandfathered group of retirees has an optional form which, upon death, 66.67% of the benefit continues to be paid to the beneficiary.

APPENDIX C

RISKS ASSOCIATED WITH MEASURING THE ACCRUED LIABILITY AND ACTUARIALLY DETERMINED CONTRIBUTION

RISKS ASSOCIATED WITH MEASURING THE ACCRUED LIABILITY AND ACTUARIALLY DETERMINED CONTRIBUTION

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Asset/Liability mismatch – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
6. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rate shown on page 13 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

PLAN MATURITY MEASURES

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	<u>January 1, 2020</u>	<u>January 1, 2019</u>
Ratio of the market value of assets to total payroll	4.3	3.7
Ratio of actuarial accrued liability to payroll	4.8	4.7
Ratio of actives to retirees and beneficiaries	2.0	2.1
Ratio of net cash flows to market value of assets	-1%	-2%
Duration of the actuarial accrued liability	13.5	13.6

RATIO OF MARKET VALUE OF ASSETS TO PAYROLL

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 4.0 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

RATIO OF ACTUARIAL ACCRUED LIABILITY TO PAYROLL

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 5.5 times the payroll, a change in liability 2% other than assumed would equal 11% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

RATIO OF ACTIVES TO RETIREES AND BENEFICIARIES

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

RATIO OF NET CASH FLOW TO MARKET VALUE OF ASSETS

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

DURATION OF ACTUARIAL ACCRUED LIABILITY

The duration of the actuarial accrued liability may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

ADDITIONAL RISK ASSESSMENT

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability
